Sterling, Virginia

Prepared by:

Inter-National Research Institute (INRI)

Version Description Document for Web Status of Forces (WEBSOF)

SYSTEM OVERVIEW

Web Status of Forces (WEBSOF) is a background process that works with the Enhanced Linked Virtual Information System (ELVIS) to generate Status of Forces information in HyperText Markup Language (HTML) format for access by web browsers. WEBSOF is designed to run as a cron job and outputs status/error information to logs for periodic review. Version 1.3 supports Navy Status Of Resources and Training System (SORTS), Employment Schedule (EMPSKD), Casualty Report (CASREP), and Movement Report (MOVREP) data sets as contained in the Operations Support System (OSS) ORACLE database.

2. REFERENCED DOCUMENTS

None.

3. VERSION DESCRIPTION

3.1 Inventory of Materials Released

€ Magnetic media: 4mm tape consisting of the ELVIS and WEBSOF segments, HP-UX format, intended for the Tactical Advanced Computer, versions 3 and 4 (TAC-3 and TAC-4) hardware environment.

€ Magnetic media: 4mm tape consisting of the ELVIS segment, Solaris format, intended for the SparcStation 5 and 20 hardware environment.

€ *Version Description Document for the WEB Status of Forces Version 1.3*, Document Control No. ELVIS.WEBSOF.1.3.VDD-1, March 7, 1996.

3.2 Software Changes

Version 1.3 is the first release of WEBSOF; therefore, this release contains no software changes.

4. INSTALLATION INSTRUCTIONS

Refer to the *Installation Procedures Guide for the Enhanced Linked Virtual Information System (ELVIS) and Web Status of Forces Version 1.3* for installation instructions.

5. KNOWN PROBLEMS AND ERRORS

€ EMPSKD HTML files generated by WEBSOF may contain Uniform Resource Locator (URL) links to EMPSKD files that do not exist. In this case, the browser displays a message that the documents could not be found.

€ Installation of WEBSOF overwrites /h/WEBSOF/data/status.log and /h/WEBSOF/data/run.log (so this is not a problem for first-time installations).
